HeatMANAGER™

Works with Any Fuel

The “Brains” Behind an Efficient, Money-Saving Hydronic Heating System

Beckett HeatManager is a patented, microprocessor-controlled device for oil, gas or propane hydronic heating systems. It reduces fuel consumption 10-20% by automatically adjusting the burner run pattern to match the system's heat load. With HeatManager, you will enjoy lower heating bills season after season. In most cases, it pays for itself in only 12 to 24 months!

Important HeatManager Benefits

- Guaranteed to reduce fuel consumption 10-20%
- Short payback period—typically 12-24 months
- Increased savings without replacing or upgrading costly system components
- State-of-the-art microprocessor control
- Easily installed, plug-in sensors
- LED indicators show operating modes
- Simple, 15-30 minute installation by qualified installer
- No programming or follow-up visits required
- Reduces burner maintenance and extends boiler life
- Fail-safe operation
- 5-year replacement warranty

*A smart way to lower
your heating fuel bills!*
